## PROFESSIONAL SUMMARY

Machine Learning Engineer with hands-on experience in building end-to-end machine learning pipelines using Python, Scikit-learn, TensorFlow, and Flask. Experienced in working with real-world datasets (10,000+ records) for classification and recommendation systems. Skilled in data preprocessing, feature engineering, model evaluation, and deployment. Focused on developing scalable AI solutions with measurable performance improvements.

---

## EDUCATION

### Bachelor of Information Technology (IT)

The Egyptian E-Learning University (EELU), Sohag, Egypt  
09/2021 – 06/2025

---

## EXPERIENCE

Machine Learning Developer Trainee

Digital Pioneers Initiative – MCIT & Egyptian Military Academy | Cairo, Egypt

02/2026 – Present

- Built and evaluated 5+ machine learning models for classification and regression tasks using Python and Scikit-learn
  - Integrated multiple Kaggle medical datasets into a unified dataset of 10,000+ records
  - Cleaned and preprocessed 10,000+ samples, improving data quality and model stability
  - Engineered features across 3+ ML pipelines, improving training convergence and model consistency
  - Evaluated models using Accuracy, Precision, Recall, F1-score, and Cross-Validation
  - Built 3+ end-to-end ML pipelines, automating workflows and reducing preprocessing overhead
- 

## PROJECTS

AI-Powered Health Recommendation System (Graduation Project)

02/2026 – 06/2026

- Built a diabetes prediction model using Logistic Regression on merged Kaggle datasets
  - Applied data preprocessing: cleaning, encoding, normalization, and feature scaling
  - Improved recall from 72% to 88% (+16%) using SMOTE for class imbalance
  - Built recommendation system using cosine similarity achieving 85–90% relevance accuracy
  - Deployed ML system using Flask APIs for real-time prediction
- 

Irrigation Need Prediction System

01/2025 – 05/2025

- Designed a Deep Neural Network to classify irrigation needs into Low, Medium, and High
  - Improved performance using polynomial feature engineering and interaction features
  - Reduced overfitting using L2 regularization and early stopping in TensorFlow/Keras
  - Validated performance using Stratified K-Fold Cross-Validation (5 folds)
- 

Mushroom Classification Project

01/2025 – 05/2025

- Built classification models achieving 95% accuracy for edible vs poisonous mushrooms
  - Developed preprocessing pipeline for categorical encoding and feature transformation
  - Compared Decision Tree and Random Forest models using Precision, Recall, and F1-score
  - Selected best model based on generalization performance
- 

## SKILLS

**Programming:** Python, SQL

**Machine Learning:** Scikit-learn, TensorFlow, Keras, XGBoost, Deep Learning

**Data Processing:** Pandas, NumPy, EDA, Feature Engineering, Data Preprocessing

**Visualization:** Matplotlib, Seaborn, Plotly

**Deployment & Tools:** Flask, REST APIs, Git, GitHub

**Algorithms:** Logistic Regression, Decision Trees, Random Forest, KNN
